

I claim

1. A light emitting device for light-transmissive picture, comprising  
a casing having a front face and an opposite rear face;  
a background light source unit in the housing; and  
a power supply supplying electrical power to the background light  
source for emitting a light, whereby the light-transmissive picture can be  
illuminated for better visibility.  
5
2. The light emitting device for light-transmissive picture as in claim 1,  
wherein a recess is defined at one lateral side of the front face for receiving the  
light-transmissive picture.  
10
3. The light emitting device for light-transmissive picture as in claim 1,  
wherein the light-transmissive picture is attached to the front face.
4. The light emitting device for light-transmissive picture as in claim 1,  
wherein the background light source is LED.  
15
5. The light emitting device for light-transmissive picture as in claim 1,  
further comprising a decorative light source.
6. The light emitting device for light-transmissive picture as in claim 5,  
further comprising a controller to control a lighting mode of the decorative  
light source.  
20
7. The light emitting device for light-transmissive picture as in claim 5,  
wherein the decorative light source is LED.
8. The light emitting device for light-transmissive picture as in claim 1,  
further comprising a voice IC connected to the power source.
9. The light emitting device for light-transmissive picture as in claim 8,

further comprising a loud speaker connected to the voice IC.

10. The light emitting device for light-transmissive picture as in claim 1,  
further comprising an audio IC connected to the power source.

11. The light emitting device for light-transmissive picture as in claim  
5 10, further comprising a loud speaker connected to the audio IC.

12. The light emitting device for light-transmissive picture as in claim 1,  
further comprising a light-sensitive switch.

13. The light emitting device for light-transmissive picture as in claim 1,  
wherein the light-transmissive picture is a transparent picture.

10 14. The light emitting device for light-transmissive picture as in claim  
13, wherein the light-transmissive picture is one of glass plate, acrylic plate,  
plastic plate and positive film plate.
